In adolescents, treatment goals should be informed by a comprehensive assessment that includes the adolescent patient's developmental history and evaluation of psychiatric comorbidity. Treatment for behavioral, psychosocial, and psychiatric problems should be integrated with substance abuse interventions.

### Treating adolescents for substance abuse and comorbid ...

Best practices in substance use disorder treatment for adolescents is a focus for treatment providers and researchers. NIDA (2014a) reported that drug use is highest among people in their late teens. With different drugs of use widely available to teenagers, it is important that treatment providers offer appropriate research based treatments that match each client's drugs of use.

### Best Practices: Substance Use Disorder Treatment for ...

Over 1.6 million adolescents in the United States meet criteria for substance use disorders (SUDs). While there are promising treatments for SUDs, adolescents respond to these treatments differentially in part based on the setting in which treatments are delivered. One way to address such individualized response to treatment is through the development of adaptive interventions (AIs): sequences ...

### Developing adaptive interventions for adolescent substance ...

The focus of this guide is on evidence-based treatment approaches—those that have been scientifically tested and found to be effective in the treatment of adolescent substance abuse. Whether delivered in residential or inpatient settings or offered on an outpatient basis, effective treatments for adolescents primarily consist of some form of behavioral therapy.
