

## Knowledge Management Policy of NARIT

By Executive Director of NARIT

Dr. Saran Poshyachinda

**Dear executives and all NARIT staff**

Since 2009 the core functions of NARIT have been research, high-technological developments, astronomical awareness creation and communication to Thai Society. Moreover, NARIT has established internationally competitive astronomical infrastructure in Thailand and supported astronomical research nationwide. Furthermore, NARIT has provided a diversity of services related to astronomy to serve different needs from different targeted groups in all domains, in order to make NARIT accessible to everyone and utilize NARIT's infrastructure for the best benefits.

All years long, NARIT has accumulated and gained knowledge and experiences from what NARIT has been doing. These are most valuable knowledge and experiences which needs to be kept and transferred completely within NARIT from one generation to new generation and so on. This is to let NARIT continue its best performance smoothly at all time. Therefore, Knowledge management (KM) is the key to handle this treasure of NARIT and it must be carried out systematically in order to move NARIT forward sustainably by

defining NARIT as a learning organization for astronomical developments and innovations

NARIT has set 2 strategies for KM, 1) development of NARIT's KM system and 2) formulating culture of learning for all staff for sustainable development.

I wish all NARIT staff to be proud of the knowledges we have and share or exchange the knowledge to enable us to continue the development of astronomical innovations systematically
